

JOB DESCRIPTION

Job Title: QA Engineer

Location: Ras Al Khaimah

Department: IT

Reports To: Director of IT Software Engineering

General Purpose

We are seeking a QA Engineer to join our in-house software development team. The ideal candidate will enjoy learning, seeing projects through to completion and thrive on new challenges. You will develop projects for the first casino in Arabia – Wynn Al Marjan Island. You will partner with infrastructure, cyber security and product teams.

Essential Duties & Tasks:

General

- Take charges of QA for our solutions and develop cutting edge services that will transform the hospitality industry in the UAE
- Perform manual testing to detect and reproduce bugs
- Integrate regression testing, function testing, exploratory testing into QA process
- Write auto tests for APIs, conduct load testing
- Develop auto tests for Web interfaces
- Enable visibility of our services through metrics, dashboards and alerts
- Help ensure smooth and regular releases of new features with little to no bugs, coordinating and communicating with developers
- Ensure Incident & Problem management procedures are diligently followed
- Implement and drive automation focused on productivity improvements.

Education:

- Bachelor's degree required in computer science, information technology, mathematics or related field.

Skills / Knowledge:

- 5+ years of QA experience with large-scale applications
- Extensive experience as a QA engineer in front end and backend testing within startups and enterprise.
- Strong knowledge of Python, JavaScript, Playwright, SQL, REST
- Experience with load testing solutions such as K6
- Proficiency in testing with focus on Automated end to end quality
- Understanding of monitoring tools such as Kibana, DataDog, NewRelic
- Experience collaborating in Agile Scrum teams
- Ability to mentor other engineers
- Ability to work independently as well as in a group

Work Conditions:

This is an office-based position with regular working hours.
